EASY TO DO LESSON PLAN

Directions for Sink or Float

Print the Sink or Float Poster. Cut flush on the bottom line of the first page and glue it on the top of the second page to create a long poster. Laminate the long poster and display this for whole or small group. Use a wipe off marker to record student answers. Wipe off the lamination when the activity is over and save it for the next time you use this activity.

Print the Student Sheet for Float Worksheet back to back with enough copies for each student to have one.

To carry out the activity, have the listed items in middle column gathered along with a clear tub fill with water so the students can see through the walls and the top. Starting with the first item, have students predict if the object will sink or float. Record the result with an X or checkmark in the appropriate column. Have students record the correct answer on the Student Sink or Float Worksheet. Once students have successfully completed this activity with an adult, it can be placed in centers for independent exploration.
